PROFILE

Computer Engineering undergraduate at the University of Ruhuna who builds offline AI systems and ships full stack products end to end. Experienced with local LLMs and voice pipelines, React and Spring Boot web apps, concurrent Java networking, and Docker/Jenkins CI/CD. Looking for a Software Engineering or AI/ML internship where I can deliver real features from the first sprint.

EDUCATION

BSc Engineering (Hons) in Computer Engineering — Expected graduation: 2028
Faculty of Engineering, University of Ruhuna, Sri Lanka · 25th batch

PROJECTS

Jarvis Offline Assistant — github.com/Risapan/Jarvis_Offline_assist
Python · MLX Whisper · Ollama (local LLM) · Kokoro TTS · WebRTC VAD

- Built a real-time voice assistant that runs fully offline on a laptop, with no cloud APIs and no data leaving the device.
- Chained voice activity detection, Whisper speech-to-text, a local LLM and text-to-speech into one low-latency pipeline.
- Added voice control of macOS apps and settings.

EasyPick: Vehicle Rental Platform — github.com/Risapan/EasyPick_Devops
React · TypeScript · Node.js/Express · MySQL · JWT · Docker Compose · Jenkins

- Developed a vehicle reservation and rental platform for Sri Lanka with separate customer and owner dashboards.
- Implemented owner verification and JWT-based authentication on an Express REST API backed by MySQL.
- Containerised the frontend, API and database with Docker Compose and automated builds with a Jenkins pipeline.

BidNet: Real-Time Auction System (team project) — github.com/Risapan/bidnet_demo
Java 21 · TCP sockets · Virtual threads · Jackson · Maven · JUnit 5 · GitHub Actions

- Built a multi-client live auction server over raw TCP, handling each connection on Java 21 virtual threads.
- Designed a newline-delimited JSON protocol and kept bids consistent across concurrent clients.
- Covered the engine with JUnit 5 tests run on every push through GitHub Actions.

Hospital Appointment System — github.com/Risapan/Hospital_Appointment
Java · Spring Boot · Spring Security · JWT · MongoDB · React · TypeScript · Tailwind CSS

- Created a role-based platform for patients, doctors, receptionists and admins, each with its own portal.
- Secured the Spring Boot API with Spring Security and JWT, and added audit logging for admin actions.

Multi-Agent Trading Insight System — Personal project
Python · FastAPI · Server-Sent Events · Ollama · yfinance

- Designed an Analyst → Reviewer → Judge pipeline of local LLM agents that debate live market data and stream a final suggestion to a chat UI.

TECHNICAL SKILLS

Languages	Python, Java, TypeScript, JavaScript, C, Swift, SQL
Web & Backend	React, Vue, Tailwind CSS, Node.js, Express, Spring Boot, Spring Security, FastAPI, REST, JWT
AI / ML	Ollama, LLM agents, Whisper (speech-to-text), text-to-speech, scikit-learn, Jupyter
Databases	MySQL, MongoDB
DevOps & Tools	Docker, Docker Compose, Jenkins, GitHub Actions, Linux, Git, Maven

ACTIVITIES

- Participated in hackathons, building working prototypes under time pressure as part of a team.
